Profile	Product designer with a B.Tech in computer science (AI & ML), and sole designer at 3S Smart Ship Solutions. I design complex B2B SaaS and IoT systems and see them through to production, because good design shouldn't stop at the handoff.	
Experience	Product Designer · sole designer 3S Smart Ship Solutions	Jul 2025 – Present
	– Marine Form Automation. Designed the product end to end (document ingest and classification, candidate profile, plain-language search, form filling) and built the Next.js prototype that engineering implemented against. Assembling a Master's joining forms went from about an hour by hand to under five minutes. In production with clients. – AskDB. Designed an AI natural-language-to-SQL tool over a maritime crewing database, printing the SQL beside the rows it returns. Now the default path for routine questions that used to wait in a manual SQL queue. – Ask Luma. Re-architected the platform inside one release cycle, then rebuilt it ground up as a document memory that asks before it answers and shows the source of every answer. Two features shipped after launch without bending the structure. – Stream (PMS). Reworked about 50 screens around the workflows operators actually run, and shipped four new features. – Design system and QA. Maintain ~140 tokens and ~41 base components across new and legacy products; run design QA with the CTO from prototype to live build each release.	
	Product Design Intern · sole designer 3S Smart Ship Solutions	Feb 2025 – Jul 2025
	– Smart Draft Survey. Redesigned the legacy survey app, replacing a 16-screen flow with a four-step, eight-screen journey. – Gauge Right. Owned a mobile product from zero: MVP scope, user flows and production assets, delivered in three weeks.	
	UI/UX Design Intern Monospace	Aug 2024 – Oct 2024
	– Designed three core user flows across ~15 screens from scratch, with high-fidelity prototypes and a 15-component design system.	
Independent	– Scarecrow. Open source on GitHub. A command-line tool that runs synthetic user personas through a product in a headless browser and reports where they got stuck. Built to get some usability signal as the only designer across seven products. – Vithos. Founding product designer. Keeps a family's lab reports in one place and tracks results over time. In beta.
